la convergenza è uniforme in ogni intervallo  $]-\infty; -a]$  oppure  $[a; +\infty[$ ,  $a > 0$ .

$$\sum_{n=0}^{+\infty} n e^{-n x^2} = \sum_{n=0}^{+\infty} n \cdot (e^{-x^2})^n. \text{ Con il criterio della Radice:}$$

Se  $x=0$ :  $\sum_{n=0}^{+\infty} n$ : Serie divergente. Quindi  $\mathcal{C} = \mathbb{R}^*$ .

$\nabla f(1; 1; 1) = (3; 0; 0)$ . Si può definire solo una funzione  $(y; z) \rightarrow x$ .

$$\frac{\partial x}{\partial y} = -\frac{0}{3} = 0; \frac{\partial x}{\partial z} = -\frac{0}{3} \Rightarrow \text{Equazione piano tangente in } (y; z) = (1; 1):$$

CAME

La convergenza è uniforme in quanto  $|\rho \cdot \cos^3 \alpha| \leq \rho < \varepsilon$  con  $\delta(\varepsilon) = \varepsilon$ .

$$\begin{aligned} \text{Sia } v = (\cos \alpha, \sin \alpha). \quad \partial_v f(0;0) &= \lim_{t \rightarrow 0} \frac{f(0+t \cos \alpha, 0+t \sin \alpha) - f(0;0)}{t} \\ &= \lim_{t \rightarrow 0} \left( \frac{t^3 \cos^3 \alpha}{t^2 \cos^2 \alpha + t^2 \sin^2 \alpha} - 0 \right) \cdot \frac{1}{t} = \lim_{t \rightarrow 0} \frac{t^3 \cos^3 \alpha}{t^3} = \cos^3 \alpha \quad \forall \alpha. \end{aligned}$$

$$\frac{\partial f}{\partial x}(0;0) = \lim_{h \rightarrow 0} \frac{f(0+h;0) - f(0;0)}{h} = \lim_{h \rightarrow 0} \frac{h^3}{h^2 \cdot h} = 1;$$

$$\frac{\partial f}{\partial y}(0;0) = \lim_{h \rightarrow 0} \frac{f(0;0+h) - f(0;0)}{h} = \lim_{h \rightarrow 0} \frac{0}{h^2 \cdot h} = 0.$$

Per la differenziabilità occorre verificare:  $\lim_{(x,y) \rightarrow (0,0)} \frac{f(x,y) - f(0;0) - \nabla f(0;0) \cdot (x-0; y-0)}{\sqrt{x^2+y^2}}$

sia o un limite che tende a 0.

$$\lim_{(x,y) \rightarrow (0,0)} \frac{\frac{x^3}{x^2+y^2} - 0 - (1;0) \cdot (x-0; y-0)}{\sqrt{x^2+y^2}} = \lim_{(x,y) \rightarrow (0,0)} \frac{x^3 - x^3 - xy^2}{(x^2+y^2)\sqrt{x^2+y^2}} \Rightarrow$$

$$\Rightarrow \lim_{\rho \rightarrow 0} \frac{-\rho^3 \cos \alpha \sin^2 \alpha}{\rho^2 \cdot \rho} = -\cos \alpha \sin^2 \alpha = 0 \text{ Solo se } \alpha = 0; \frac{\pi}{2}; \pi; \frac{3}{2}\pi.$$

Quindi la funzione non è differenziabile in  $(0;0)$ .
